

# HOW WOULD YOU LIKE YOUR ROLLER TREATMENT ?

Complex And Time Consuming

OR

Ready to use & Effective

## TOPSPIN

Is your roller varnish acting as a speed breaker in your High speed Draw frame and Comber machines? Is the other Roller treatment complex and time consuming?

We have great pleasure in offering you TOPSPIN which is QUICK and EFFECTIVE. We use roller varnish to counter fluff generation and lapping but the best varnish provides protection for only 8 hours and needs repeated application. Every application takes away 20 minutes of production time in each shift i.e. one hour per day of production is lost for roller varnish application. The Present roller varnish also fails to meet the stringent requirement of processing on latest high-speed machines.

In short, the productivity and quality is both at risk when we use simple roller varnish on the High speed Draw frame and Comber machines.

TOPSPIN is ready to use solution and can be directly applied on rollers. It requires only 30 minutes to dry.

GET QUALITY AND PRODUCTIVITY ADVANTAGE WITH TOPSPIN

- TOPSPIN will give you trouble free performance for 15 - 20 days in Draw Frame and Comber.
- Fluff Collection on the Rollers and clearers is reduced by 12 % after. TOPSPIN treatment.
- Reduction in Fluff Liberation will be a great quality boon as increased Fluff accumulation increases yarn imperfection by 30 to 40% and objectionable faults by 30 to 80%.
- The once in 20 days application will not only give you one hour extra production per day but will also save about 50 % of cost being spent on roller varnish presently.
- TOPSPIN is very effective if you are processing STICKY COTTON.
